

If you've ever traded using price action, you may have noticed some patterns work better than others.

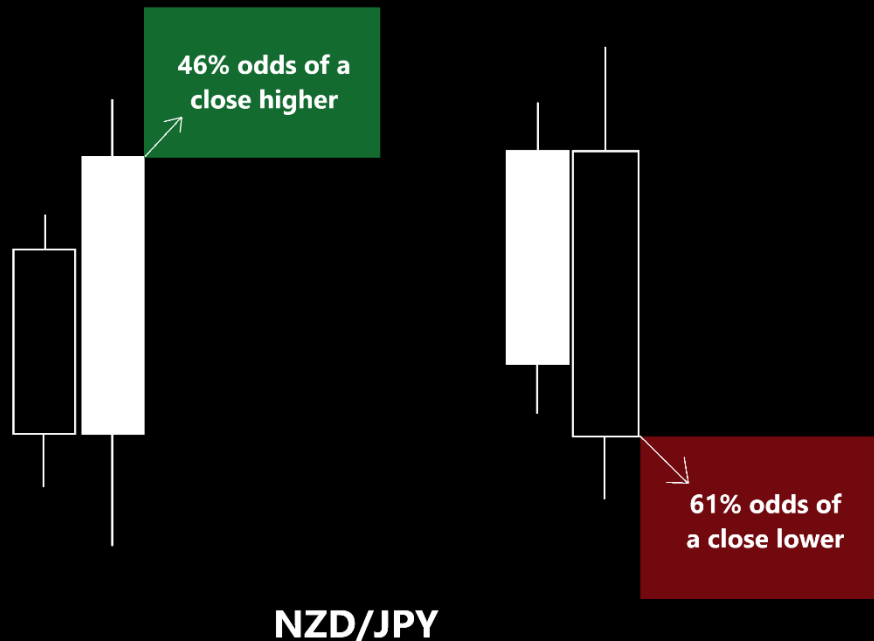

Take the daily bullish engulfing bar in USD/JPY.

Over the last 10 years, the bullish engulfing bar has had 54% odds of a close higher the next day. Yet the bearish engulfing bar in the same pair over the same period only had 39% odds of a close lower the next day.*

You may assume then that bullish engulfing bars are just a stronger pattern than bearish engulfing bars.

Again, the odds say otherwise. In another yen pair, NZD/JPY, daily bearish engulfing bars perform significantly better, with 61% odds of a close lower the next day, versus 46% odds of a close higher for bullish engulfing bars.

Now you can start to see why traders who specialize in one market tend to perform better in that market than traders who focus on multiple markets. Each market has its own personality. The only way to know exactly how a market behaves is to focus on that single market.

Or is it? What if you could know the odds of each price pattern across 42 different forex, metals, indices, and futures markets? Each time you saw a tradeable pattern, with good market context, you could check the odds and see if that price pattern favours that instrument.

Imagine the edge you could gain in knowing that a daily shooting star* in crude oil futures has 61% odds of failing within the next 3 days?

Or that USD/CAD has 76% odds of returning to the Sunday open price after the close of the Monday candle?

Or that in EUR/USD if price breaks the high of an inside day, then closes back within the range of the inside day, there is 74% odds of breaking the inside day low the next day?

Every week the OddsRadar Weekly Open gives you the probability of selected price patterns from the weekly timeframe to help you select better trades. This report is entirely free, you can subscribe [here](#).

But the magic of OddsRadar really shines when you look at price patterns from the daily timeframe. The OddsRadar Daily Report is a premium service that gives you odds to enhance your edge in the market every day. Try a 7 day free trial [here](#). I'm confident you will find it an indispensable tool in your trading.

*All odds were measured on 12th Oct 2023 over the last 10 years

*Defined as a candle where the range is greater than 0.5x ATR over the last 200 days, the high breaks the high of the prior candle and closes back beneath, and both the open and close occur within the lower $\frac{1}{3}$ of the candle's range.
